Cognitive Mind Meets the Artificial:

*How AI Reshapes Survey Research Through
The Lens of Response Process Theory*

The Challenge We Face in Health Surveys

...As AI tools...weave their way into survey practice, the need grows to equip researchers with the **theoretical understanding**...¹

Current PROM Limitations²

- Rigid Structure
- Complex medical terminology
- Forced response choices
- Post-hoc scoring

What LLM-PROMs Promise

- Adaptive dialogue
- Plain language clarification
- Open narrative responses
- Real-time Insights

UNIVERSITY OF MARYLAND

Learning Objectives

- 1 **Explore** LLMs applied in survey research
- 2 **Analyze** LLM-PROMs through Tourangeau's four-stage framework lens
- 3 **Synthesize** implications and practitioner recommendations

LLM Application in Survey Research

AI Interviewing

Conversational data collection with adaptive questioning.¹⁻³

Response Coding

Automated categorization of open-ended responses.⁴⁻⁶

Questionnaire Design

AI-assisted creation and bias detection.^{7,8}

Translation Support

TRAPD process assistance.⁹

Data Quality Issues

Respondents using AI to generate answers.^{10,11}

TRAPD (Translation, Review, Adjudication, Pretesting, and Documentation).

Tourangeau's (2000) Cognitive Response Process Framework

Theoretical Analysis Approach

Goal: Understand how AI fundamentally alters each stage of survey response cognition

UNIVERSITY OF MARYLAND
**INSTITUTE FOR
HEALTH COMPUTING**
MPOWERING THE STATE

Stage 1: Comprehension Transformation

BENEFITS

Health literacy adaptation

Medical term clarification

Personalized phrasing

CHALLENGES

Loss of standardization¹

Reduced comparability²

AI training bias³

Core Trade-off: Personalization vs. Standardization

1. Conrad & Schober, 2000; 2. Schaeffer & Maynard, 2008; 3. Conrad et al., 2014

Stage 2: Retrieval Transformation

BENEFITS

Systematic symptom reviews

Chronological sequencing

Memory prompting

CHALLENGES

Symptom suggestion¹

False affirmation²

Memory contamination³

Critical Risk: AI suggestions may create false memories or symptom endorsement

1. Fisher & Quigley, 1992; 2. Lee et al., 1999; 3. Conway, 2005

Stage 3: Judgement Transformation

BENEFITS

Reduced coder burden

Rapid processing

Consistent interpretation

CHALLENGES

Loss of patient agency¹

Missing emotional factors²

Context interpretation gaps³

Fundamental Shift: From internal patient evaluation to external algorithmic processing

1. Tourangeau, 2000; 2. Conrad et al., 1998; 3. Brown & Siegler, 1993

Stage 4: Response Transformation

BENEFITS

Rich narrative capture

Reduced cognitive burden

Holistic health dimensions

CHALLENGES

Hybrid expression¹

Systematic response bias²

Measurement equivalence³

Core Issue: no longer measure pure patient expression

1. Suchman, 2007; 2. Lind et al., 2013; 3. Schwarz, 2010

Critical Trade-offs Summary

Stage	What We Gain	What We Lose
Comprehension	Accessibility	Standardization
Retrieval	Memory support	Authentic recall
Judgement	Efficiency	Patient agency
Response	Rich data	Authentic voice

Implementation Framework

Critical Recommendation: Patient Partnership

Amplify, not replace, patient voices

- Patients as co-designers with decision making power
- Testing across diverse communities
- Feedback mechanisms shaping tool evolution
- Transparency about response processing

HEALTH COMPUTING**
MPOWERING THE STATE

Conclusion

LLM-PROMs offer genuine potential but require fundamental rethinking of measurement validity

- ✓ Each cognitive stage fundamentally transformed
- ✓ Real benefits coupled with serious validity threats
- ✓ Patient partnership is non-negotiable for success
